IMPORTANT INFORMATION - PLEASE READ AND SAVE

Anchor Plate
Micro-Anchor Plate
Made in USA
of US and foreign components

MEETS THE AUXILIARY EQUIPMENT REQUIREMENTS OF NFPA 1983,
STANDARD ON LIFE SAFETY ROPE AND EQUIPMENT FOR
EMERGENCY SERVICES, 2017 EDITION.

WARNING

• SERIOUS INJURY OR DEATH MAY RESULT FROM THE IMPROPER USE OF
  THIS EQUIPMENT.
• THIS EQUIPMENT HAS BEEN DESIGNED AND MANUFACTURED FOR USE BY
  EXPERIENCED PROFESSIONALS ONLY.
• DO NOT ATTEMPT TO USE THIS EQUIPMENT WITHOUT PRIOR TRAINING.
• THOROUGHLY READ AND UNDERSTAND ALL LABELS AND INSTRUCTIONS
  BEFORE USE.
• USE, INSPECT AND REPAIR ONLY IN ACCORDANCE WITH MANUFACTURER’S
  INSTRUCTIONS.

User Information shall be provided to the user of the product. NFPA Standard 1983
recommends separating the User Information from the equipment and retaining
the information in a permanent record. The standard also recommends making a copy of the User
Information to keep with the equipment and that the information should be referred to before
and after each use.

Additional information regarding auxiliary equipment can be found in NFPA 1500, Standard
on Fire Department Occupational Safety and Health Programs, and NFPA 1983, Standard on
Life Safety Rope and Equipment for Emergency Services.

Inspection

Inspect the equipment according to your department's policy for inspecting life safety
equipment. Inspect the equipment prior to entry into service, after each use, and at least once
every 12 months. The equipment should be thoroughly inspected by an inspector that meets
your department’s training standard for inspection of life safety equipment. Keep a record of
the date, person performing the inspection and results, as well as the date of first use, name
of users and any other pertinent information necessary to keep accurate track of the
equipment’s usage history in the equipment log or on a tag that attaches to the equipment.
Each user should be trained in equipment inspection and should inspect the equipment before
each use.

Inspect the equipment for cracks, sharp edges, dents, corrosion, burrs or excessive wear.
Minor nicks or sharp spots may be smoothed with emery cloth. If any of the above is noted, or
if the equipment has been subjected to shock loads, fall loads, or abuse other than normal
use, remove the equipment from service and destroy it. If there is any doubt about the
serviceability of the equipment, remove the equipment from service and destroy it.

The service life of equipment depends greatly on the type of use and the environment of
use. Because these factors vary greatly, a precise service life of the equipment cannot be
provided.

Using the Anchor Plate

The design of the Anchor Plate is such that the large hole provides a focal point for
connectors linking to a proper anchorage. The smaller holes provide connection points for
auxiliary system equipment such as system lowering and belay devices.

CARRYING, MAINTENANCE & STORAGE

Clean and dry this equipment after each use to remove any dust, debris and moisture.
During use, carrying and storage keep the equipment away from acids, alkalis, rust and strong
chemicals. Do not expose the equipment to flame or high temperatures. Store in a cool, dry
location. Do not store where the equipment may be exposed to moist air, particularly where
dissimilar metals are stored together.

Repair

All repair work shall be performed by the manufacturer. All other work or modifications void
the warranty and releases CMC from all liability and responsibility as the manufacturer.

Sample Log

The sample log suggests records that should be maintained by the purchaser or user of life
safety equipment.
